Web Accessibility Audit

Citylights Demo (W3C)

https://www.w3.org/WAI/demos/bad/after/home.html

Standard	WCAG 2.2 Level AA (EN 301 549 / European Accessibility Act)
Audit date	24 October 2026
Pages tested	2
Prepared by	Ahmed Basher
Overall risk	**MEDIUM**

1. Executive summary

We tested **2 pages** of https://www.w3.org/WAI/demos/bad/after/home.html against WCAG 2.2 Level AA, the technical standard behind the **European Accessibility Act (EAA)** and EN 301 549. We found **3 distinct accessibility barriers** affecting **34 elements**. Overall compliance risk is rated **MEDIUM**.

Severity	What it means	Issues	Elements
Critical	Blocks some users completely	0	0
Serious	Major difficulty for some users	1	4
Moderate	Noticeable difficulty	2	30
Minor	Inconvenience	0	0

Top priorities

• **All touch targets must be 24px large, or leave sufficient space** (4 elements, 2 of 2 pages) — Clickable targets are too small or too close together.
• **All page content should be contained by landmarks** (28 elements, 2 of 2 pages) — Some content sits outside page regions (header, nav, main, footer).
• **Document should have one main landmark** (2 elements, 2 of 2 pages) — The page has no <main> region, so keyboard and screen-reader users cannot jump to the content.

Why this matters

Since 28 June 2025 the EAA requires e-commerce, banking, transport, telecom and e-book services offered to EU consumers to be accessible. National authorities can order corrections and impose penalties, and French courts have already ordered a major retailer to make its site fully accessible within six months. Beyond compliance, accessible sites reach the roughly 1 in 4 EU adults living with a disability, and usually perform better in search and on mobile.

Note: automated testing reliably detects roughly a third of WCAG issues. Section 4 lists the manual checks needed for a complete conformance assessment.

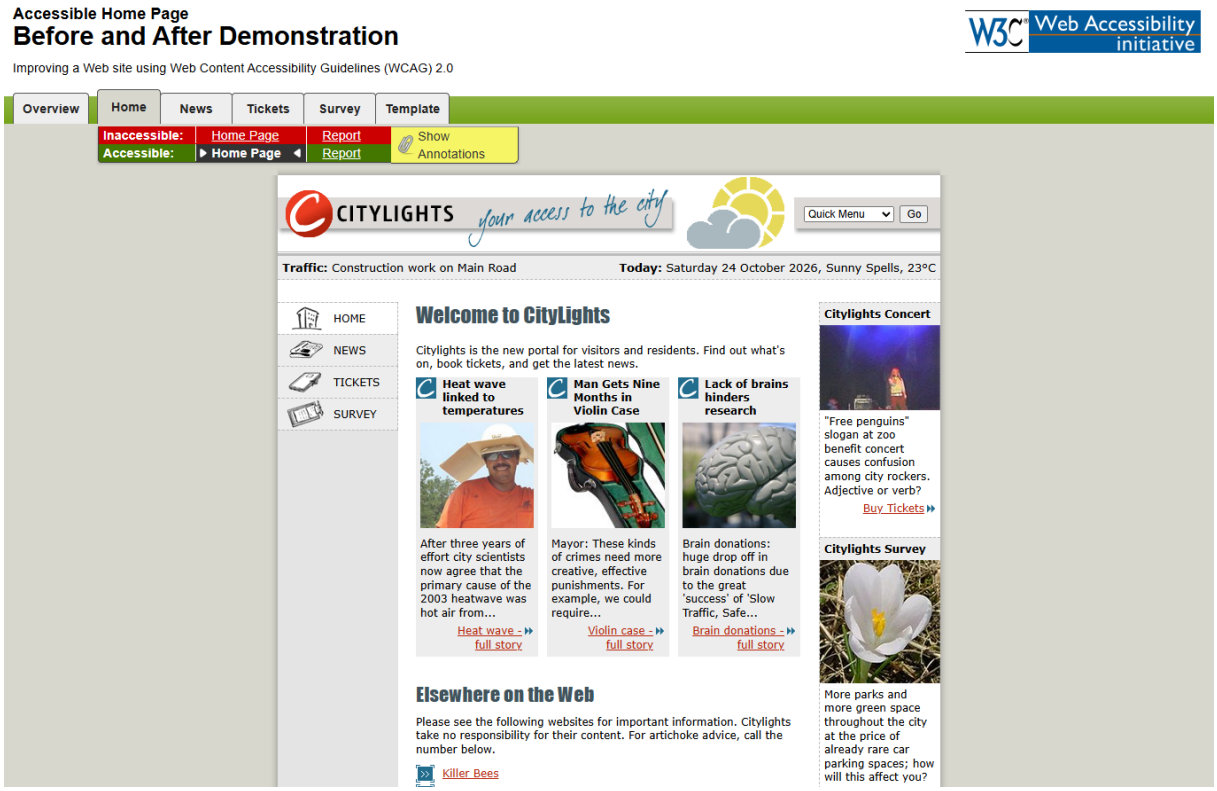

Changes since last check

Previous check: **2026-09**. Affected elements went from **123** to **34** ▼.

Status	Issue	Elements
Fixed	Images must have alternative text	72
Fixed	Select element must have an accessible name	2
Fixed	Links must have discernible text	11
Fixed	Elements must meet minimum color contrast ratio thresholds	2
Fixed	<html> element must have a lang attribute	2

2. Pages tested

#	Page	Issues	Elements
1	**Welcome to CityLights! [Accessible Home Page]** https://www.w3.org/WAI/demos/bad/after/home.html	3	17
2	**Citylights News [Accessible News Page]** https://www.w3.org/WAI/demos/bad/after/news.html	3	17

Home page as tested

3. Detailed findings & how to fix them

3.1 All touch targets must be 24px large, or leave sufficient space

Severity	**Serious**	**WCAG**	2.5.8 Target Size (Minimum)
Affected	4 elements on pages 1, 2	**Who**	Users with motor impairments, all mobile users

Problem: Clickable targets are too small or too close together.
Fix: Make targets at least 24x24 CSS pixels or add spacing between them.

Example from your site:

```
<a href="../before/reports/home.html" class="report"><span class="hidden">Inaccessible Home Page </span>
Report</a>
```

3.2 All page content should be contained by landmarks

Severity	**Moderate**	**WCAG**	Best practice
Affected	28 elements on pages 1, 2	**Who**	Screen-reader users navigating by landmarks

Problem: Some content sits outside page regions (header, nav, main, footer).
Fix: Place all content inside semantic landmarks: <header>, <nav>, <main>, <footer>.

Example from your site:

```
<p id="logos"><a href="https://www.w3.org/" title="W3C Home"><img alt="W3C logo" src="../img/w3c.png"
height="48" width="72"></a><a href="https://www.w3.org/WAI/" title="WAI Home"><img alt="Web
Accessibility Initiative (
```

3.3 Document should have one main landmark

Severity	**Moderate**	**WCAG**	Best practice
Affected	2 elements on pages 1, 2	**Who**	Screen-reader and keyboard users

Problem: The page has no <main> region, so keyboard and screen-reader users cannot jump to the content.
Fix: Wrap the primary content in a single <main> element.

Example from your site:

```
<html lang="en">
```

4. Manual testing checklist

These criteria cannot be verified by software and are tested by hand with keyboard-only navigation and the NVDA screen reader.

Check	Requirement	WCAG	Result
Keyboard only	Every link, button, menu and form can be reached and used with Tab / Shift+Tab / Enter / Space.	2.1.1	■ Pass ■ Fail
Visible focus	The element that has keyboard focus is always clearly visible.	2.4.7	■ Pass ■ Fail
No keyboard trap	Focus never gets stuck inside a pop-up, video or widget.	2.1.2	■ Pass ■ Fail
Skip link	A 'Skip to content' link lets keyboard users bypass the navigation.	2.4.1	■ Pass ■ Fail
Screen reader (NVDA)	Headings, images, buttons and form fields are announced meaningfully.	1.3.1 / 4.1.2	■ Pass ■ Fail
Form errors	Errors are described in text and tell the user how to fix them.	3.3.1 / 3.3.3	■ Pass ■ Fail
Zoom 200% / reflow	Content works at 200% zoom and at 320px width without horizontal scrolling.	1.4.4 / 1.4.10	■ Pass ■ Fail
Video & audio	Videos have captions; audio has a transcript.	1.2.2 / 1.2.1	■ Pass ■ Fail
Moving content	Carousels / animations can be paused.	2.2.2	■ Pass ■ Fail
Cookie banner & checkout	Consent banner and the full purchase flow work with keyboard and screen reader.	EAA core flow	■ Pass ■ Fail

5. Recommended next steps

1. **Fix critical and serious issues first** — they block users and carry the highest legal risk.
2. **Complete the manual checks** in Section 4, focusing on the checkout / booking flow.
3. **Publish an accessibility statement** on the site, as required by the EAA.
4. **Re-test after fixes** and add automated accessibility checks to future releases.

Methodology: pages were rendered in Google Chrome and tested with axe-core 4.10.3 using the WCAG 2.0/2.1/2.2 A and AA rule sets. This report is a technical assessment and does not constitute legal advice.
